An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dale Regelman on 3/12/2008.

#### **IN THE CLAIMS:**

The application has been amended as follows:

1. Cancel claims 7-18.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: claims 1 and 3-6 are allowable over the prior art as the prior art neither teaches or suggests an oral dosage form comprising a bi-layer tablet consisting of a first layer and a second layer, an encapsulant disposed over the bi-layer tablet, wherein the first layer comprises oxycodone HCl in combination with dextromethorphan HBr, wherein the ratio of oxycodone HCl to dextromethorphan HBr is 1:5 by weight and wherein the oral dosage form does not include an opioid antagonist and the oral dosage form includes an aperture extending through the encapsulant and into the first layer.

The closest prior art is Mayer et al. (US Patent 5,869,498) in view of Guittard et al. (US Patent 6,124,355). In particular, Mayer et al. teaches pain-alleviating drug

compositions comprised of an opioid such as oxycodone and a NMDA antagonist such as dextromethorphan. Mayer et al. does not teach a bi-layer tablet comprised of the drug combination. Guittard teaches bi-layer tablets in which a coating surrounds the semipermeable wall. Guittard further teaches that the dosage form comprises a passageway in the wall that connects the exterior of the dosage form with the internal compartment and also discusses that the passageway contacts the surface of the drug layer (Col. 6, lines 25-28 and Col. 7, lines 17-21). However, the references in combination do not teach that the oral dosage form is formed to include an aperture that extends through the encapsulant and into the first layer. Applicants have provided a Declaration showing the advantages of having an aperture that extends through the encapsulant and into the first layer (the present invention) in comparison with an aperture that does not extend through the encapsulant and into the first layer. The results in the Release Profiles in the Declaration show that the dosage form of the present invention exemplifies a quicker release of the drug, which occurs within 5 hours (see Second Oral Dosage in the graph), compared to the dosage form in which the aperture does not extend through the encapsulant and the release of the drug occurs within 24 hours, as seen in the Guittard et al. reference in Figure 1 (see First Oral Dosage). Therefore, the claims are considered novel and non-obvious over the teachings of the prior art because Applicants have shown that when the dosage form has an aperture that extends through the encapsulant and into the drug layer, there is much quicker release of the drug (within approximately 5 hours) compared to the prior

Art Unit: 1617

art composition in which the aperture does not extend through the encapsulant layer and the release occurs over approximately 24 hours.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
